

The more you wash the more you need a Whirlpool washer.

We're always looking for new ways to help you get more clothes clean. That's why all our large-capacity washers have the exclusive Double Duty Super Surgilator® agitator.

The vertical vanes and upswept fins contribute to the special washing action. Instead of just moving back and forth, your clothes also roll from the top of the tub to the bottom.

The design creates a vigorous, surging action that washes every item, even when

the loads are big. And it also handles your small loads gently.

At Whirlpool, we know washing larger loads may help you save your time and energy. That's why we build large-capacity Whirlpool® washers. And put the Double Duty Super Surgilator agitator (shown enlarged above) into every one we build. Because even when your loads are large, we want every item to come out right every time.
